PyTorch Foundation Technical Advisory Council Meeting

2026 November 10

Reminder for meeting participants

- This meeting is being recorded
- Please remember to be on mute upon entry unless you would like to speak
- All zoom chat messages will become public
- Please ensure your name and affiliation are showing correctly

Questions? Email support@pytorch.org

Antitrust Policy Notice

Linux Foundation meetings involve participation by industry competitors, and it is the intention of the Linux Foundation to conduct all of its activities in accordance with applicable antitrust and competition laws. It is therefore extremely important that attendees adhere to meeting agendas, and be aware of, and not participate in, any activities that are prohibited under applicable US state, federal or foreign antitrust and competition laws.

Examples of types of actions that are prohibited at Linux Foundation meetings and in connection with Linux Foundation activities are described in the Linux Foundation Antitrust Policy available at http://www.linuxfoundation.org/antitrust-policy. If you have questions about these matters, please contact your company counsel, or if you are a member of the Linux Foundation, feel free to contact Andrew Updegrove of the firm of Gesmer Updegrove LLP, which provides legal counsel to the Linux Foundation.

Agenda

- Administrative - 5 min
- Foundation Updates - 5 min
- Q4 Project Updates - 20 min
- Working Group Updates - 15 min
- Call for Topics/Open Discussion - 5 min

Meeting Schedule

2026

- ~~January 13~~
- ~~February 10~~
- ~~March 10~~
- ~~April 14~~
- ~~May 12~~
- ~~June 9~~
- ~~July 14~~
- ~~August 11~~
- ~~September 15~~
- ~~October 13~~
- November 10
- December 8

2027

- January 12
- February 9
- March 9
- April 13
- May 11
- June 8
- July 13
- August 10
- September 14
- October 12
- November 9
- December 14

All meetings start at 7am PT/4pm CET unless otherwise indicated.

TAC Representatives - Member Companies

Welcome Dave, Eyal and Ryan!

Company/Project	Primary Voting Representative	Alternate Voting Representative
Alibaba Cloud	Tao Ma	Sanhong Li
Amazon Web Services	Shauheen Zahirazami	Sundar Ranganathan
AMD	Jeff Daily	Niles Burbank
ARM	Milos Puzovic (TAC Vice Chair)	Andrew Wafaa
Cambricon	Jing Zhu	
Google Cloud	Claudio Basile	Michael Voznesensky
Huawei	Yikun Jiang	Fengchun Hua
IBM	Joseph Groenenboom	Dave Grove
Intel	Eikan Wang	Ashok Emani
Lightning AI	Thomas Viehmann (TAC Chair)	
Meta	Gregory Chanan	Davide Italiano
Nscale	Eyal Lantzman	
Nebius B.V.	Ryan Wang	
NVIDIA	Piotr Bialecki	Michael Ruberry
Snowflake	Mert Hidayetoglu	
Shopify	Shuying Sun	
Gold Members	Weizhu Chen	

TAC Representatives - Projects

Welcome Richard!

Company/Project	Primary Voting Representative	Alternate Voting Representative
PyTorch Project	Alban Desmaison	
DeepSpeed	Tunji Ruwase	Minjia Zhang
vLLM	Simon Mo	Richard Bian
Ray	Robert Nishihara	
Helion	Jongsok Choi	
Safetensors	Luc Georges	Lysandre Debut

Foundation Updates
Mark Collier

Time allocation: 5 minutes

Foundation-Hosted Project Lifecycle Process Update

5 Improvements Over Lifecycle v1.0

Latest version here: View Document

In Voting – Please vote!
⅔ in favor in order to pass

01	**Clearer maturity ladder**	Incubated, Graduated and Archived replace one hosted stage, Candidate status and Platform/Vertical types.
02	**Simpler on-ramp**	No Ecosystem prerequisite or Candidate step: submit a proposal, present to the TAC, win a majority vote.
03	**A reason to keep growing**	Graduation (TAC and Governing Board supermajority) adds a TAC seat and priority event access.
04	**More ongoing accountability**	Quarterly updates, annual TAC review, public quarterly TSC meetings, EasyCLA or DCO.
05	**Shorter, more usable doc**	Judgment-based criteria, a separate guidance doc, and clearer archive steps (README status, successors).

Q4 Hosted Project Updates

Time allocation: 20 minutes

Q4 Ray Project Update

Robert Nishihara

Q4 Ray Project Update

- **Updates / Features**
  - Hardening at 10K node scale
  - Launched Ray sandboxes
  - Ray Serve LLM / Ray Data LLM - GA
  - Improved head-node fault tolerance
  - Token authentication on by default
- **Community**
  - Ray Summit (co-located with vLLM conference) (~2K attendees, ran training for 800)
  - Sandboxes community sync
  - Accelerator SIG
  - KubeRay donation to CNCF
  - Reflection, Lila Sciences / SkyRL, Periodic Labs, Nemotron, MAI
- **4 main PyPI Releases (since last update)**
  - 2.57.0, 2.58.0, 2.59.0, 2.60.0 (also 2.57.1, 2.58.1, 2.59.1)
- **Priorities**
  - Ray improvements
    - Planning / prototyping for 100K+ node scale to support frontier-scale pre-training / post-training
    - Prioritizing “design-doc driven” development
    - Hardware-support (dedicated SIG)
  - Fastest growing ecosystem areas:
    - Sandboxes
    - RL
    - Multimodal data

Q4 PyTorch Project Update

Alban Desmaison

Q4 PyTorch Project Update

Recap: Apr - Jun 2026

- Q2
  - 4,935 commits, 750 Unique authors (+13%).
  - 1,862 opened issues, 3,295 issues closed (bulk cleanup of TorchScript)
- **Release 2.13/2.14/2.15**
  - Compiler: NVGEMM (CuTeDSL-generated CUTLASS kernels with epilogue fusion and NVFP4 in Inductor), torch.switch, declarative dynamic shapes via @dynamic_spec, experimental complex-tensor compile support
  - Distributed: torchcomms, a rewritten NCCL backend (preview in 2.14, default in 2.15), and fault tolerance as a first-class c10d concept
  - MPS/Metal: FlexAttention on Apple Silicon, native linalg (SVD, eigh, QR, Cholesky), MPSGraph → Metal migration continues
  - Hardware: Rubin (sm_107), ROCm 7.14 wheels via TheRock, Intel XPU graph capture, Armv9-A compile targeting

Ahead: Oct - Dec 2026

- **Areas of active development:**
  - 2.15 is out; the 2.16 release cycle comes next
  - Continued Metal/MPS work (FP8 and grouped_mm landed in 2.15)
  - Stable ABI and more partner enablement.
  - CRCR rollout (see the RFC on slide 36)
  - More hardware enablement (AMD gfx950/MI450, CUDA 13.x)
  - New Dtype and performance improvements

Q4 DeepSpeed Project Update

Tunji Ruwase

Q4 DeepSpeed Project Update:

Recap: July - Sept 2026

- **TSC on LFx**
  - Huawei joined TSC
  - Monthly virtual office hours
- **5 Releases**
  - Memory: offloading, pinning, etc.
  - H/W: MPS, ARM SVE, NEON CPU, KPU etc.
  - Parallelism: AutoTP/AutoEP/Ray-based PP
  - HybridEngine/OPD
  - Deprecations
- **Events**
  - PyTorch Conf China
- **Ongoing (upcoming blogs)**
  - Ray-based PP
  - AutoEP
  - Memory pinning/offload
  - HybridEngine/OPD

Ahead: Oct - Dec 2026

- **Q4 roadmap**
  - AutoEP
  - Hybrid Engine/OPD
  - Ray-based PP
- **Blogs**
  - Ray-based PP
  - AutoEP
  - Memory pinning
- **Events**
  - PyTorch Conf NA
  - PyTorch Conf Japan
  - SC 26

Q4 vLLM Project Update

Richard Bian

Q4 vLLM Project Update:

RECAP: Q3: July - Sept 2026

- **Stable Release Cadence**
  - 6 releases, v0.25 -> v0.30, 1 every ~2 wks
- **Core Refactor landed**
  - Model Runner v2 default for all models (v0.29)
  - Flat model migration for top-20 architectures
  - Rust frontend + new tool-calling prod ready
  - Faster cold-start: preload weight-cache daemon
- **Agentic & large-scale serving**
  - agent hints (session-ID / correlation-ID) for multi-turn
  - Production multi-tier KV offload (disk, object store, mooncake)
- **Model sprints & spec decode**
  - Day-0 work with perf enhancement: Kimi K3, DS v4.1-flash, GLM-5.x
  - DFlash / DSpark / DFlare drafters, >5 acceptance length

Ahead (and ongoing): Q4: Oct - Dec 2026

- **Q4 roadmap**
  - published, check roadmap.vllm.ai
- **Finish the core refactor**
  - remove Model Runner v1: pluggable KV cache config
  - CUDA graph cleanup; Rust frontend towards default
- **Agentic serving made easy**
  - production recipes: PD disagg + KV offload
  - richer agent hints with Dynamo & llm-d
  - fault tolerance: NaN handling, EP recovery
- **New hardware & Quantization**
  - NV Rubin + AMD MI455X; FP4 KV cache; LUT-B (W3A8)
- **Ecosystem and OSS maintenance**
  - Model sprints (DS v4.1, Qwen 3.8, GLM-5.3)
  - OSS Strategy alignment with partners / maintainers

Q4 Helion Project Update

Jongsok Choi

Q4 Helion Project Update

Recap:

- **Updates**
  - At PTC San Jose, presented Helion's new CuteDSL backend for NVIDIA Blackwell GPUs and Pallas backend for TPUs.
    - Same Helion kernel outperforms state-of-the-art attention implementations (cuDNN, FlashAttention 4, FlexAttention) on Blackwell GPUs and Google's hand-optimized Tokamax library on TPUs.
  - Helion megakernel compiler: First Helion megakernels shipped in SGLang as part of the Muse Spark Open launch
  - Strong collaborations with Google, NVIDIA, AMD, Intel, RedHat, HuggingFace
    - Helion is supported in Hugging Face's Kernels project
    - IBM Research presented its own Helion attention backend for vLLM at PTC San Jose.
    - Red Hat developed Helion inference kernels for vLLM
    - NVIDIA integrated CompileIQ technology into Helion.
  - Helion's agentic compiler hillclimbing presented at MICRO 2026 workshop
- **PTC:** 4 talks/sessions in San Jose, 1 in China
- **Releases:** 4 releases. Latest 1.5.2 release in Nov, 2026.

Ahead:

- **Priorities (major projects under consideration)**
  - Generalize the CuTe backend for more kernels/use cases
  - Improve Helion megakernel compiler performance and robustness

Q4 safetensors Project Update

Luc Georges

Q4 safetensors Project Update

Recap:

- **Priorities**
  - cuda fast path loading
    - multithreaded pread into pinned host buffers -> H2D into cudamallocasync buffers, dlpack handover
  - hardening
    - metadata validation, slice bounds, dlpack lifetime fixes
- **Updates / Features**
  - prefetch API: `Open::prefetch(plan)` -> `PrefetchLoader` handle
  - prefetch plans support tensor spans, not just full tensors
  - `get_tensor_meta` on `safe_open`
- **Releases**
  - 0.9.0-rc1

Ahead:

- **Priorities (major projects under consideration)**
  - release 0.9.0
    - finish slicing logic
    - arbitrary slices in prefetch plans, read only needed bytes
    - make safetensors tensor memory visible to torch
  - (maybe) io_uring exploration
  - drop 3.10 (EOL)
    - see if we decide to leverage PyBuffer after all now that we have dlpack 0-copy handover

Working Group Updates

Time allocation: 15 minutes

Working Group Process & Lifecycle

PREVIOUS STATE

GitHub Baseline

Current language on GitHub doesn't define process or lifecycle.

Lacks standardized guidelines for WG creation, structure, and operational expectations.

PROPOSED DRAFT

Formation & Review

Draft Formation Process & Lifecycle (Document Link)

- Defines official process for forming a working group
- Establishes requirements for creating a charter
- Outlines regular review cadence by the TAC

ACTION & STATUS

TAC Approval

CTA: TAC to vote to approve proposal.

Status

Approved!

CI Working Group Update

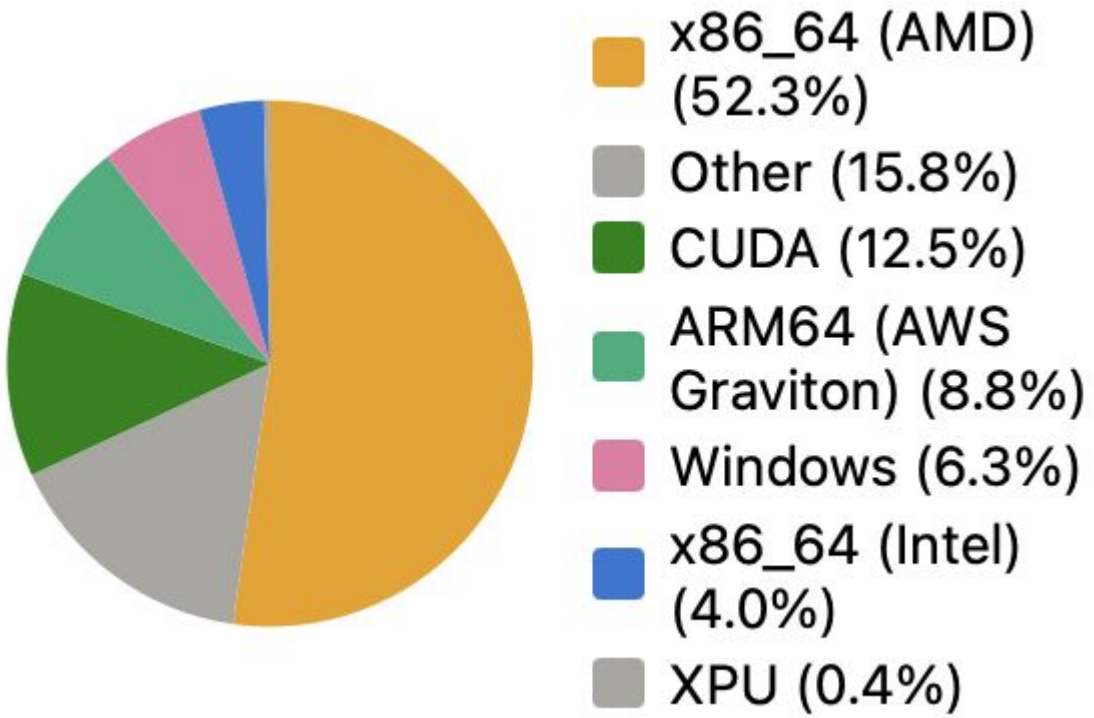

Thanh Ha

CI Working Group Update

- AWS Costs Update
  - Costs in October: 494k
  - AWS Credits remaining: 1.08m
  - 23% of jobs allocated to Foundation account (Excluding Inductor Jobs)
- GitHub OSDC (ARC) CI Updates
  - Continuing to optimize costs and improve cluster sizing
  - Runner allow list deployed to give us more flexibility in which runners run on the LF Fleet
  - OSDC support for Windows WIP
  - Nvidia GB300 now available for PyTorch CI

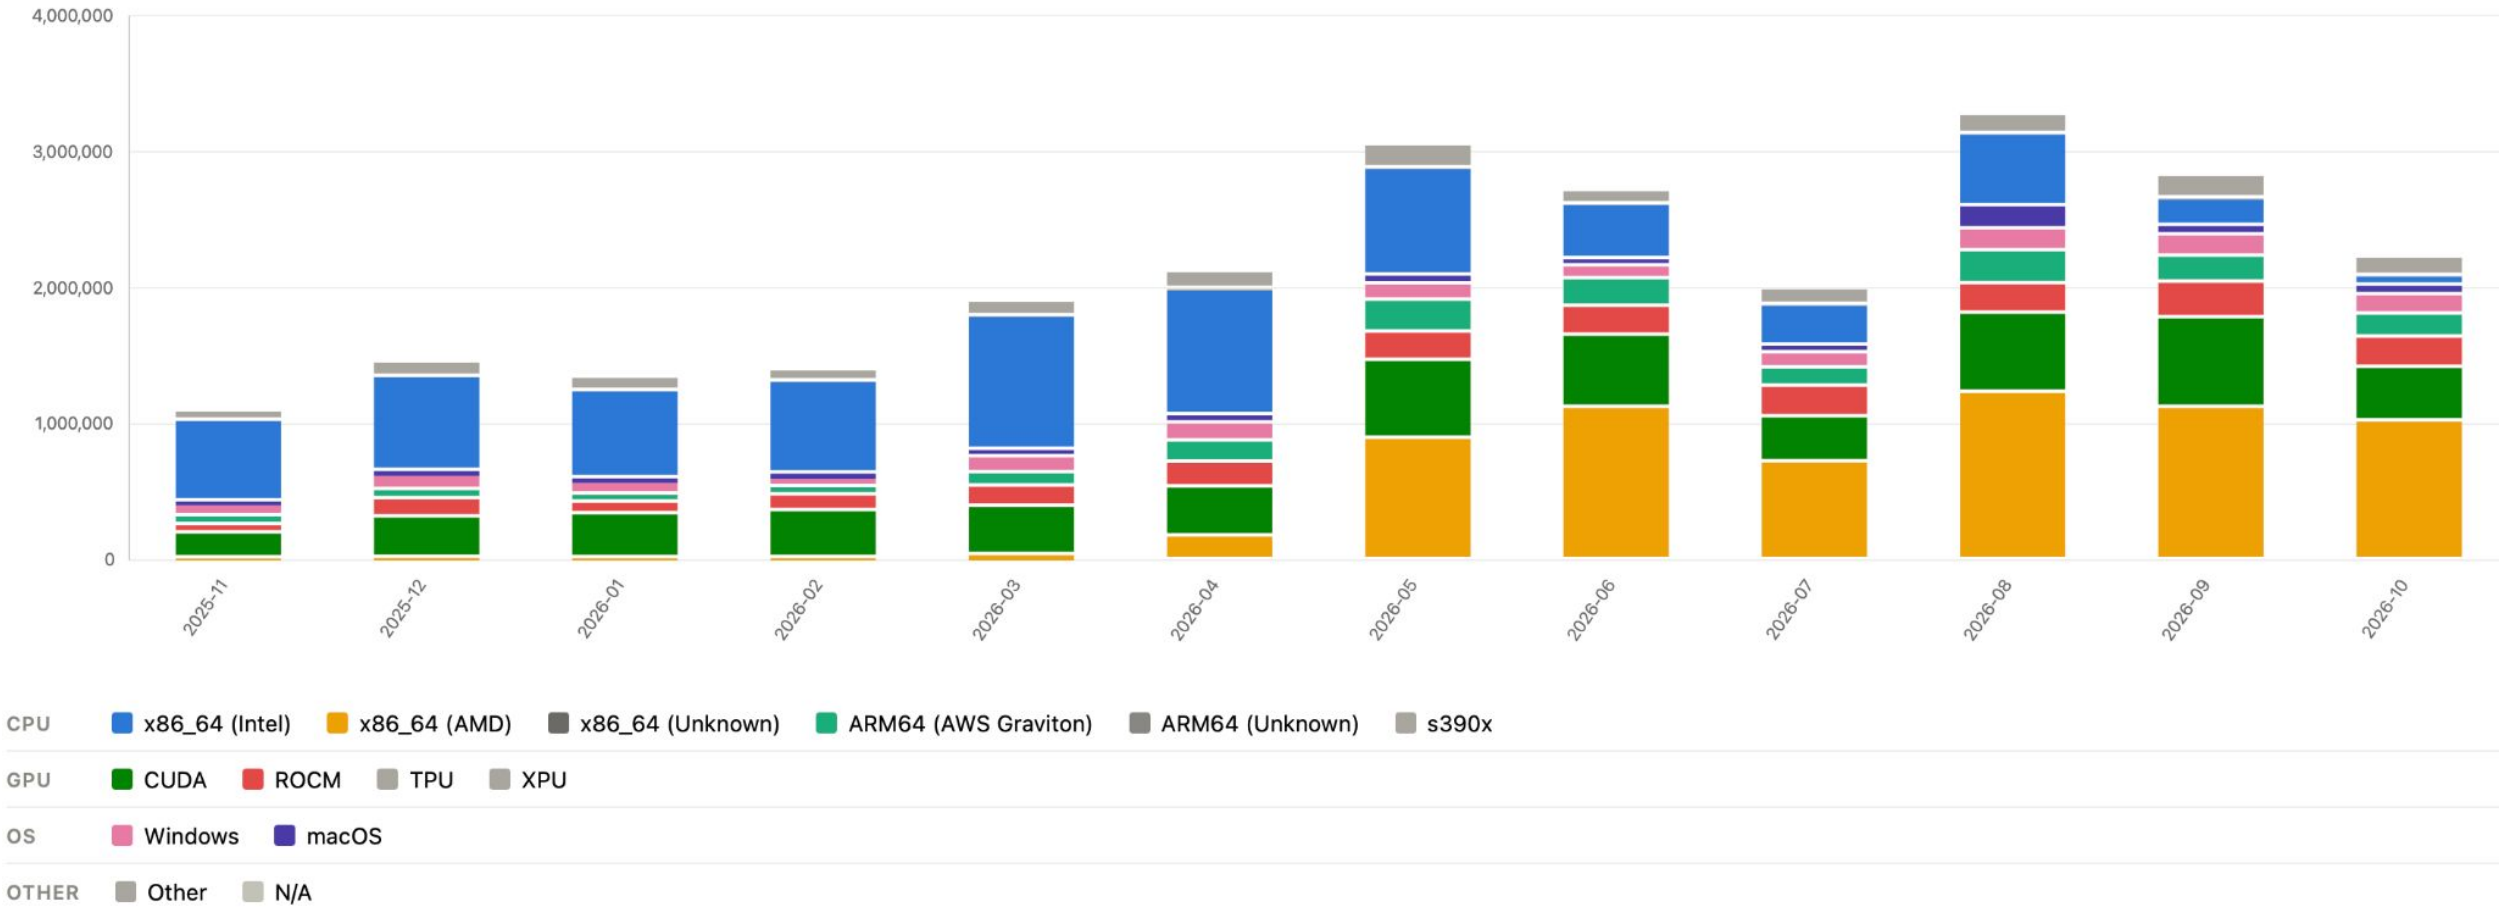

Costs To PyTorch Foundation by Architecture October 2026

Architecture	Cost
x86_64 (AMD)	$258,069.56
Other	$77,977.46
CUDA	$61,786.73
ARM64 (AWS Graviton)	$43,624.05
Windows	$30,979.18
x86_64 (Intel)	$19,584.94
XPU	$1,859.63
N/A	$0.00
TPU	$0.00
macOS	$0.00
x86_64 (Unknown)	$0.00
ARM64 (Unknown)	$0.00
ROCM	$0.00
s390x	$0.00
Total	**$493,881.55**

Ecosystem Working Group
Chris Hoge/Joseph Groenboom/ Eikan Wang

Ecosystem Working Group Updates

News and Updates 🎉:

- Welcome Joseph Groenboom (Red Hat) as Ecosystem Working Group co-chair
- Upon approval of new Working Group and Official Project guidelines, will write a new group charter

Upcoming Reviews 🔍:

- Kubeflow Trainer - Distributed ML Training and Fine-Tuning on Kubernetes
- PerforatedAI - Denndritic Optimization, for smarter, smaller, cheaper ML Models
- verl - A reinforcement learning library for LLMs
- AReal - a scalable, PyTorch-native reinforcement learning (RL) infrastructure
- einops - Flexible and powerful tensor operations for readable and reliable code
- Feast - open source feature store that delivers structured data to AI and LLM applications at scale
- PINA - open-source library designed to accelerate the development of Scientific ML solutions

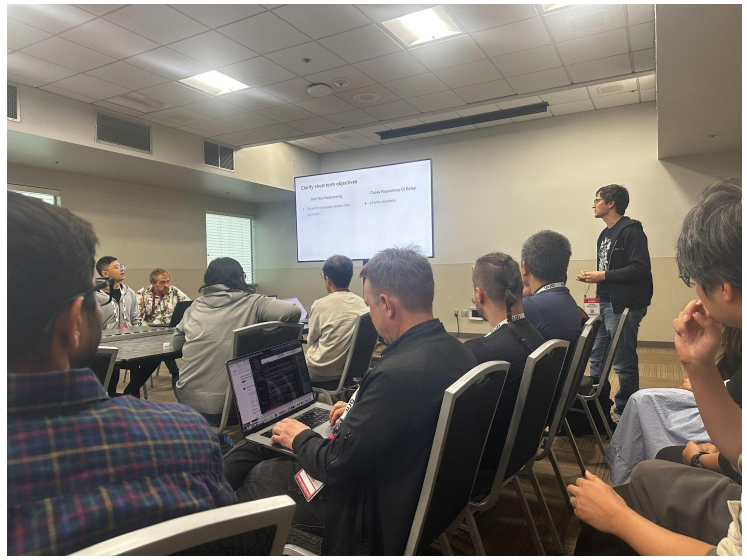

Accelerator Integration Working Group

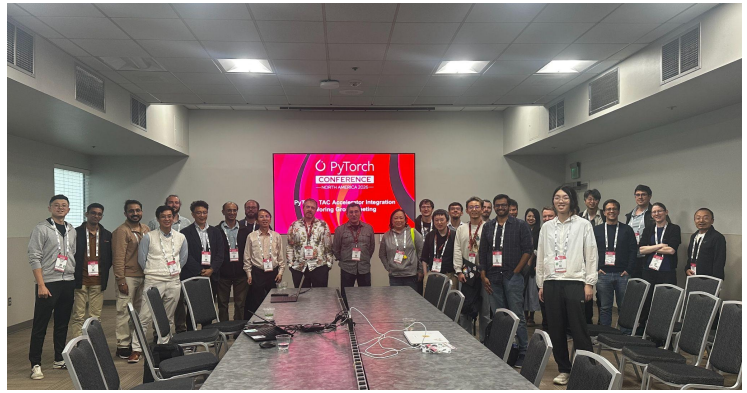

Zesheng Zong

Accelerator Integration Working Group Updates

Working Group In-Person Meeting @ PyTorch Conference NA 2026(Slides)

- **Short term objective:**
  - CRCR: L4 entry standards
  - Test Refactoring: Expand to ecosystem project
- **Long term objective:**
  - Common API for accelerators
  - Centralized test selection for accelerators
  - Stable ABI for PU1 extension
  - Better torch.compile extension points
  - Extend CRCR to test releases
  - More release related work

Accelerator Integration Working Group Updates

Test Refactoring

- 431/1,023 test files have been refactored, with 10 PRs under final review.

Cross-Repository CI Relay (RFC)

- External-CI onboarding milestone — foundational security improvement eliminating shared long-lived credentials for external providers #8326
- Callback-rate reliability — directly improved operational reliability with raised rate limits and retry logic; closed an active incident #9096, #9019
- Configured-level history and auditability — durable ClickHouse audit schema and HUD decision-audit interface shipped #8894, #9115, #9138
- Nightly matrix correctness — focused fix to keep qualifying nightly SHA jobs together in the matrix #8961, #8927, #9024, #9061, #9045, #9046
- Failure-triage signal propagation — callback verdicts persisted and rendered on HUD/Dr. CI for L3+ downstream results #9018, #9114, #9270, #9300, #9301
- Temporary-demotion resilience — level-sync workflow can refresh conflicted demotion PRs in place #8941, #8944, #9170

Security Working Group

Nikita Shulga

Security WG Updates

- 25 issues reported in last 30 days, 7 closed, 2 in draft, 0 published
  - PyTorch dependencies has been updated to discard eMudhra certificates
  - Preparing to disclose that Torch JIT script checkpoints are unsafe

- Incoming advisories are triaged every other week on Tuesdays at 8:30AM PST
  - Meetings are not open to public by design
  - If you have some security background and want to join, post in `#tac-security-wg`

OSPO & Academic Outreach Working Group

Ana Jimenez/George Chellapa/Sumantro Mukherjee

OSPO & Academic Outreach WG Updates

Repo: https://github.com/pytorch-fdn/wg-ospo-and-academic-outreach

WG Chairs: Sumantro Mukherjee (Red Hat), George Chellapa (NVIDIA), Ana Jiménez

Updates:

- Day Zero Academic Community Event successfully completed at PyTorch Conference NA.
- Lightning talks featured TinyTorch from Harvard University and ETH Zurich, OpGuard from the University of Michigan & ByteDance Seed, and the Auditory-Inspired Acoustic Network (AIAN) from Nagoya University.
- Other discussion topics included the OSPO & Academic Group roadmap and updates, Cross-Repository CI Relay, ExecuTorch for Edge AI, Open Source Licensing Best Practices, and Embodied AI.
- Attendance was lower than expected. The WG is now debriefing on the event and capturing lessons learned to shape future workshops.
- Pilot blog highlighting TinyTorch live. OpGaurd blog post is WIP
- CTA: **We welcome ideas for future blog posts highlighting academic projects.**

Open Discussion

Open Discussion

Using PyTorch allowed LinkedIn to enable production-grade optimization at previously infeasible scales.

In our latest PyTorch Foundation case study, the engineering team at LinkedIn shares how they re-architected their extreme scale Linear Programming Solver (DuaLip GPU). Built using PyTorch to enable multi-GPU computations and parallelism, this solver serves as a core building block for massive matching problems that power ranking, personalization, and recommendation systems.

To maximize parallelism, the team tailored GPU execution techniques to sparse matching constraints. They developed constraint-aligned sparse layouts, batched projection kernels, and a distributed design focused on dual variables. They also updated the underlying ridge-regularized dual ascent method with Jacobi-style row normalization, primal scaling, and a regularization parameter continuation scheme.

When tested against extreme scale matching workloads, the GPU implementation achieved a 10x wall-clock speedup over the previous distributed CPU DuaLip solver while maintaining strict convergence guarantees. This project represents an excellent intersection of ML systems, mathematical optimization, and machine learning.

Read the complete case study here 👉 https://lnkd.in/eE67sxcB

PyTorch Trademark Policy

PyTorch® is a registered trademark. Per the Linux Foundation Trademark Usage Guidelines:

Trademarks are used to provide assurance to the community of consistency with respect to the quality of products or services with which the mark is associated. This policy attempts to strike the proper balance between two competing interests:

1) the need of The Linux Foundation to ensure that its trademarks remain reliable indicators of the qualities that they have been created to preserve; and,

2) the need of The Linux Foundation to ensure that community members are able to discuss the projects with which The Linux Foundation is associated and to accurately describe the relationship between The Linux Foundation and the products and services offered by others.

Questions? Email trademark@pytorch.org

- **Don't** use a trademark as a verb or noun - use only as an adjective followed by the generic name/noun.
- **Don't** use in the plural or possessive form.
- **Don't** alter or amend a trademark in any way, including combining with another mark, hyphenating, abbreviating, or displaying in parts.
- **Don't** use it as your domain or as part of your domain name.
- **Don't** use it as part of your product name.
- **Don't** incorporate it into your company's logos or designs.
- **Do** make fair use of word marks to make true factual statements, as long as you acknowledge the owner of the trademark.
- **Do** use the full form of any trademark in the first reference, after which you may then use any abbreviated or short form references.

For the full trademark guidance, please review https://www.linuxfoundation.org/legal/trademark-usage and https://pytorch.org/wp-content/uploads/2025/09/pytorch_brand_guide_091925a.pdf
